LCS IT Solutions Ltd - Our Cyber Security Expertise:

Here at LCS IT Solutions Ltd, we believe that keeping our customers safe in an increasingly connected world starts with investing in the right people, skills and expertise.

We've realised that whilst we've been working in the background helping our clients and designing new solutions we have may have omitted to tell the world that we actually have **three members of our Team who have achieved Accredited Cyber Essentials (ACE) status in Cyber Security.** This isn't a new thing, we've had these accreditations in place for a few years now, we just haven't made a song and dance about it.

Investing in expertise to protect our customers

Cyber security threats continue to evolve, with businesses of all sizes facing increasing risks from cyber attacks, data breaches, phishing attempts and other malicious activity.

At LCS IT Solutions Ltd, we understand that our role goes beyond simply keeping IT systems running. Helping our customers operate securely, confidently and with resilience is an essential part of the service we deliver.

Having three ACE Practitioners within our Team further strengthens our in-house knowledge and expertise, supporting our commitment to recognising potential risks, understanding cyber security challenges and helping our customers take a proactive approach to protecting their businesses.

What does ACE Practitioner status mean?

Achieving ACE Practitioner status demonstrates a commitment to developing knowledge and practical understanding within the field of cyber security.

For our team members, this achievement represents an investment in their professional development and an ongoing commitment to keeping their skills relevant in a constantly changing cyber security landscape.

For our customers, it provides further confidence that they are working with an MSP that values technical excellence, continuous learning and the importance of cyber security.

A stronger Team means stronger protection

We recognise that effective cyber security isn't a one-off exercise. It requires continuous awareness, the right technical knowledge and a proactive approach to managing risk.

ACE PRACTITIONER
Cyber Security

IT SOLUTIONS
Trusted | Reliable | Friendly

By developing the skills and capabilities within our Team, we are better positioned to support our customers with their wider IT and cyber security requirements.

This achievement also reflects our wider commitment to building a knowledgeable, skilled and forward-thinking team that understands the importance of protecting businesses, their people and their data.
